Research grants and contracts

At the COPL, Université Laval, I have been awarded more than \$5 million in equipment grants to build a state-of-the-art experimental research facility. The laboratory includes a world class fiber Bragg grating writing facility, a very high bit rate (115 Gb/s) optical transmission testbed for advanced modulation formats and a full suite of test and measurement equipment for the characterization of active and passive devices.

I regularly obtain operating funds from major Canadian grant agencies. I have been the principal investigator on research grants totalling more than \$6 million and I have been a co-researcher on grants totalling \$4.8 million. I have been the principal investigator on several industry sponsored projects, including collaborative research on fiber Bragg gratings and silicon photonics with TeraXion inc. and on fiber lasers with Coractive Hightech.

Publications

During my career, I have published **150 papers** in peer-reviewed journals, almost all IEEE or OSA, and **more than 200 papers in highly selective conferences** such as OFC (Optical Fiber Communications Conference), ECOC (European Conference on Optical Communications), and CLEO (Conference on Lasers and Electro Optics). All students under my direct supervision, including a large number of undergraduate students, have conducted original research that has led to scientific publications in peer-reviewed journals or international conferences. As per **Google scholar**, my work has received **more than 4300 citations (h-index=33)**. I am the co-author of 6 patents, 3 of which have been transferred to the industry. Two articles had received **more than 350 citations**.

Teaching and supervision

My team is typically composed of 8 graduate students and 2 post-doctoral researchers and some undergraduate research assistants. More than 30 students and researchers have graduated from my laboratory and found employment in the industry, research institutes and universities. Some have done post-doctoral internships in prestigious laboratories and several past graduates now hold tenure track positions. My students acquire a broad vision of the photonics/communication fields by participating in the activities of the Province of Quebec's research centers COPL (Center for Optics, Photonics and Lasers) and SytaCom (Center for Advanced Systems and Technologies in Communications). Students trained in my laboratory acquire a mix of theoretical and practical knowledge, and their research always involve both simulations and experimental work. They participate in the definition of research objectives and are involved in discussions with industrial partners. These skills

make them extremely attractive either for academic positions or for research positions in the photonic industry.

At Université Laval, in addition to teaching regular courses of the Electrical Engineering curriculum, I have developed three new courses in the field of optics and photonics including a graduate course on optical fiber components, an undergraduate course on optical communications that includes 6 laboratory sessions, and a continuing education course on fiber optic communications that was given more than twelve times to engineers and professionals in the industry. I am also participated in an online course on simulations of optical communication systems in collaborations with colleagues from Queen's University, McGill University, and Université Laval.
